

PETROLEUM REFINING INDUSTRY

Hydrocarbon Processing Industry (HPI)

The global Petroleum Refining Industry never stops changing. As the economies of developing countries continue to strengthen and new sources of crude oil emerge, grassroots refinery projects are being continually planned, and upgrades, revamps and retrofits for existing refineries are increasingly frequent. Industrial Info's market intelligence in the Petroleum Refining Industry encompasses the production of gasoline, heating oil, jet fuel, diesel, petroleum byproducts and liquefied petroleum gases, among other products from refineries and lube oil plants. Our market intelligence includes capital and maintenance spending events, operational and pre-commissioned plants as well as units and equipment on-site.

- Major Capital and Maintenance Projects
- Planned and Unplanned Unit Maintenance
- Plant and Unit Information
- Equipment Details
- Key Management Contacts
- Latest Industry News Alerts

MAJOR PROJECTS

Capital and maintenance projects and key contacts that are constantly updated and tracked from the planning stages to the construction and start-up phases.

PLANT

Our Plant Search includes detailed plant profiles for operational, pre-commissioned and decommissioned facilities in the Refining Industry, with up to eight key management contacts.

UNIT MAINTENANCE OUTAGES

Planned and unplanned turnarounds on such units as FCCUs, hydrotreaters, visbreakers, delayed cokers and many others. Covers past, ongoing and future events.

UNIT/EQUIPMENT PROFILES

Constantly updated details on more than 16,000 operational, pre-commissioned and decommissioned refining units, around the world. Includes actual and designed capacity, startup/stop dates, environmental requirements, and more.

LONG-TERM SERVICE AGREEMENTS

This information is integrated with Plant data to help users track Long-Term Service Agreement (LTSA) details.

SECTORS IIR COVERS

Petroleum Refiners

All petroleum refining operations engaged in the processing of sweet, heavy, & sour crude oils for the primary purpose of producing refined products, such as gasoline, heating oil, jet fuel, diesel, petroleum byproducts, and liquefied petroleum gases

Lube Oil Processors

Lube oil processing plants independent of a major refinery producing lubricating oils and greases
