

Paving the Way for Innovative Mapping Solutions

# GeoXplorer

a GMI tool

IIR's newly enhanced GIS-based mapping application, GeoXplorer, paves the way with innovative, advanced opportunities to manage actionable information, putting our data to work like never before. GeoXplorer's optimized design and capability incorporates a comprehensive portfolio of map-based elements and data visualization features, providing you with the potential to achieve powerful, effective results.

**Enhanced visualization of key data points**

**Generate PDF reports directly within GeoXplorer**

**Perform radius searches to analyze data within a certain radius of any location**

**Interactive selection tools allow you to dynamically capture select sets of data points**

**Customize your map view with specialized mapping layers, including Oil & Gas Basins, Coal Beds, NERC Regions, Transmission Lines, and more**

**Quickly zoom to a specific location with the new Address Search feature – search by specific city or address**

**Key details are readily available when clicking on any Plant, Project, or other data element point on the map**

**Your saved searches and tracking lists are directly integrated within GeoXplorer, allowing you to quickly view the results of your searches visually, on the map, or in the corresponding table view**

**Industrial Info Resources**
